

## What is Source Water Protection?

The goal of source water protection is preventing contaminants from entering waterways that serve as our drinking water sources. Protecting our source water from pollutants not only protects our drinking water supplies, but it also makes economic sense, as it can be extremely costly to remove pollutants from drinking water sources through complex treatments. Protecting our source water also helps protect the natural environment by providing a healthy habitat for countless species.

The source water for Brookville Municipal Authority customers is from a surface water intake in the North Fork Creek and two groundwater wells. To further strengthen our source water protection efforts, BMA has volunteered to participate in the Pennsylvania Department of Environmental Protection's **Source Water Protection Technical Assistance Program (SWPTAP)**.

Through SWPTAP, a source water protection plan will be developed for the BMA water system. The plan will guide BMA's source water protection efforts in the future. Once the plan is complete, it will be available for review, so that all BMA customers can learn how they can help assist our source water protection efforts.

## More Ways to Help

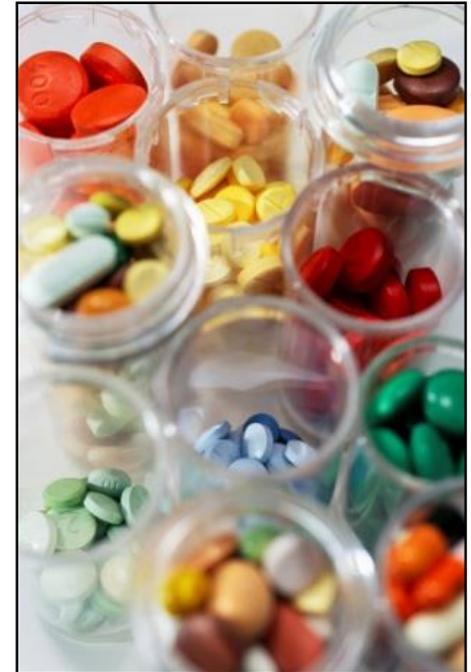

Brookville Municipal Authority is working nonstop to provide our customers with a clean and reliable source of drinking water, and we could use your help!

### Steps to help us protect our water supplies

- Dispose of motor oil at a garage that will recycle it. Never pour oil on the ground or in a storm drain or sewer on the street.
- Bring household hazardous waste – such as paint, varnishes, and other chemicals – to a waste collection event. Check the county website for programs available.
- Minimize the use of pesticides and herbicides on your lawn and garden.
- Do not dump swimming pool water into a creek or storm drain at the end of the season. If possible, direct the water into the sanitary sewer. Otherwise, wait until the chlorine diminishes and then direct water into grass, forest, or other natural area.
- Remember: Anything you throw or store on the ground can find its way into waterways. Anything you flush down the toilet or rinse down a sink will end up in a waterway. Store, handle and dispose of all chemicals properly.
- Call the Department of Environmental Protection at 814-332-6945 immediately if you observe a chemical spill.
- Stay tuned as BMA develops a Source Water Protection Plan to better protect our water supplies!

## CITIZEN'S GUIDE

### Proper Disposal of Pharmaceuticals

#### Brookville Municipal Authority Source Water Protection Program

This program is funded by the PA Department of Environmental Protection's Source Water Protection Technical Assistance Program

## A Message from the Brookville Municipal Authority

We work around the clock to provide top quality water to every tap. It is a task that we are proud of and take very seriously. We work hard to protect our water resources, which are the heart of our community, our way of life and our children's future.

To maintain a clean, dependable water supply, we need your help. This brochure was developed to make our community aware of the importance of proper disposal of prescription medications.

Please read this brochure carefully. If you have any additional questions, please refer to the federal guidelines, cited in this brochure or contact the Brookville Municipal Authority at 814.849.5320.

## Proper Disposal of Pharmaceuticals

- A few small steps can make a huge impact in safeguarding the environment.
- Take unused, unneeded, or expired prescription drugs out of their original containers and throw them in the trash.
- Mixing prescription drugs with an undesirable substance, such as sawdust or used coffee grounds or kitty litter, and putting them in impermeable, non-descript containers, such as empty cans or sealable bags, will further ensure the drugs are not diverted.
- Flush prescription drugs down the toilet only if the label or accompanying patient information specifically instructs doing so.
- If available, take advantage of community pharmaceutical take-back programs that allow the public to bring unused drugs to a central location for proper disposal.
